

SO WHAT

ABOUT

SO WHAT aims to develop and validate, through different sector and countries real industrial test cases, an integrated software for auditing industrial process, planning and simulation of waste heat and cold (WH/C) valorisation systems towards the identification of economically viable scenarios where WH/C and renewable energy sources (RES) cooperate to match local demand.

METHODOLOGY

Algorithms development for WH/C valorisation potential analysis

Development and validation of SO WHAT software

SO WHAT Replication campaign thanks to Stakeholders engagement

Dissemination and preparation of future commercial deployment of SO WHAT tool

Unlock industrial WH/C valorisation via suitable business and contractual models.
